What settings concern you?

No, I want to be sure to have all the user's settings copied to the sbs domain.

Hi Joe:

Did you remove the workstation from its old domain and make it part of a workgroup before you attempted to join the new domain?

How do I migrate PC's that were part of a Windows 2000 Server domain to a SBS2k3 domain?

The connectcomputer command doesn't allow me to do this.

Some of the workstations are Windows 2000 and XP.
