Hi --

I'm migrating a Windows 2000 server w/ Exchange to SBS 2003. This Windows 2000 server has AVG 7.5 antivirus software installed, and as far as I can tell, it's not excluding anything from its scans. This might explain why the Exchange store is fried ... But anyway, I've been looking through the program options and find few.

Does anyone have any experience with AVG on a server? Should I even attempt to move this license to SBS?

TIA
CL

.
