Recently we shifted offices. I have an SBS2003 server Dell PowerEdge 830 with 1 network adapter connecting through a router ADSL and whats changed was the router and now we are using cable DSL.

Previously, the router had the DHCP enabled. It worked fine till now.

Now the Server cannot be part of the network, cannot be pinged (strange – when I am booting up the server, the ping replies till the network connection are being set and after the ping just timed out)

I was going through the posts of similar problems and had DHCP service started up with the scope on the server and disabled the router DHCP

However this still doesnot work and the server cannot still join the network and access the internet

This is my ipconfig/all details

Windows IP Configuration

Host Name – SBS2003
Primary Dns Suffix – EurekaTravel.local
Node Type – Unknown
IP Routing Enabled – Yes
WINS Proxy Enable – Yes
DNS Suffix Search List – EurekaTravel.local

Ethernet adapter Server Local Area Connection :

Connection-specific DNS Suffix
Description – Broadcom NetXtreme Gigabit Ethernet
Physical Address – 00-15-C5-5E-CD-FC
DHCP Enable – No
IP Address – 10.10.10.3
Subnet Mask – 255.255.255.0
Default Gateway – 10.10.10.2
DNS Server – 10.10.10.3
Primary WINS Server – 10.10.10.3

Hope somebody can give me ideas of how to solve this problem!

Thanks

ET

Cannot connect to Server
