I think this thread is getting too long and the taks I want to really do is beginning to get more complicated than it should be. All I want to be able to do is manage the local policies on the member server and not have it defined by the SBS server. I created a new OU at the same level as MyBusiness and called it MyCitrix. I thought that was all that was needed. When I log onto the member server and open the local policy editor I cannot manage the "log on locally" and the "log on as a service" policies. These are being defined by the SBS server. A few simple questions here.
Did I create the new OU – MyCitrix at the wrong level?
How or what do I need to do to be able to manage these policies on the member server?

This is was my point. To the best of my knowledge only domain controllers have a group policy that defines 'log on locally'. If your 'server' is a domain controller, then that is appropriate. If it is just a member server, and it hasn't been inadvertainly placed in the domain controllers OU, then it should not have that policy. Unless someone changed the 'out of the box' settings of course.

If you want some help diagnosing *why* then your participation is needed.

- 1) Is the server a DC or *not*? (If you're not sure, we can help you make that determination.)
- 2) On the memeber server, at a command prompt, type the line below. Then post the gresult.txt file here.

```
gresult /scope computer /z>gresult.txt
```

This will detail which policy is setting the 'log on locally'

"MyCitrix" ? Is there something else "special" about this server?
