It could be stuck emails. Do you get 1023 and 1036 for all email addresses or just for specific ones?

You could start by telling us which errors you see.

EventID, Source, Description

Event ID 1019

The message download process finished with one or more errors.

For more information, see Help and Support Center at <http://go.microsoft.com/fwlink/events.asp>.

Event ID 1023

The downloading process for mailbox <xxx@xxxxxxx [mail.xxx.com]> was ended with one or more errors.

For more information, see Help and Support Center at <http://go.microsoft.com/fwlink/events.asp>.

Event ID 1036

An error occurred during a POP3 transaction to server <mail.xxx.com [xxx@xxxxxxx]>. The error is 10060 (A connection attempt failed because the connected party did not properly respond after a period of time, or established connection failed because connected host has failed to respond.).

These are all new messages. Could it be that the internet connection is at fault? Could it be a firewall issue?
