Maybe some help here...

Make sure the Web Management Settings in the Sonicwall are not using port 443 (see next link).

Sonicwall Firewall and RWW

After you have the Sonicwall set up, rerun CEICW (don't let it use UPNP to set up the router), enable the firewall, select your services (including VPN) and then complete the rest of CEICW.

Dave,

Tried the config you suggested – everything works as you stated. Port 25 and 443 sufficient for OWA, Activesync, etc. Great advise!

In terms of VPN, I completely agree with your assessment. I would LOVE to enable just VPN on the SBS server and open up the necessary Sonicwall port to passthrough but HOW? I disabled the second NIC, updated CEICW accordingly and you can't enable VPN with ISA deselected. How did you set things up?

Re: Outlook RPC/HTTP behind Sonicwall – is 443 sufficient?

thanks again!
