  - e.. KB 930414 <http://support.microsoft.com/kb/930414> – ISA Server 2004 update package for Vista 64-bit editions
  - f.. KB 930955 <http://support.microsoft.com/kb/930955> – Vista User Profile WMI Provider
  - g.. KB 931095 <http://support.microsoft.com/kb/931095> – Regarding Outlook users; note: this is a catch all KB for someone who has XP with Outlook

Re: no body in OWA messages

2007 – a separate update is not required, it is the same update as mentioned in KB 926505

Yes, it is a Vista Machine. Both my laptop and two other Vista workstations have this problem. I have not tried XP yet. I downloaded all the hotfixes, service packs, and installed the cert. Still no luck. Don't know what to do but really want to use this feature for other than just simply reading mail.

I've read all the posts I can find on the missing body when composing a new message in OWA. The server, and Exchange is complete patched (as far as I can tell), I installed my self signed cert on the client machine (no more issues with trusted cert problems), and I still can type in the body part of the composing message. It just shows the blue background with a little red x up in the left corner. I also reset all setting on my client machine's browser, and deleted all info stores (i.e., offline files, cache, reset all

Re: no body in OWA messages

settings,  
etc). Nothing changed. Still can compose a full mail  
message; just  
recipient,  
and subject. Help?

Is the client machine on Vista by any chance?
