Hi

sbs 2003 premium with ISA Server 2000. When I try <http://localhost> in the internet explorer I get the sbs web site, however when I try the server ip <http://192.168.16.2> I get a login box with MyDomain\Administrator already filled in. When I enter administrator password it still does not work and cancelling the box gives me the below errors in Intent Explorer;

HTTP 407 Proxy Authentication Required – The ISA Server requires authorization to fulfill the request. Access to the Web Proxy service is denied. (12209)

What is the problem and how can I fix it? I installed Trend CSMS for SMB which I have temporarily uninstalled to fix this problem and just wondering if installing Trend caused this problem.

Thanks

Regards

.
