Hello,

I've changed already CD/DVD reader but problems remain.

You've wrote using ISO images of CD's how did you do this?

Can you explain this to me ? Did you mount CD's with what tool ?

Anyhow thanks for your reply!

"Henrik (Hear)" wrote:

I replied In your earlier post that It can be HW related.  
Check that all HW Is on MS HCL and approved for installing SBS on.

I switched my CD/DVD to another modell and that helped me when I had the same error.

I have seen a case like yours in here before, 6-12 months ago were the solution were something else.

But for me It helped by switching CD/DVD.

I have since then started to copy ISO images of my media to the SBS after the initial installation with CD1.

Hello,

Re: sbs 2003 server tools

I've tried 5 times (also performing Quick Format of HD) installing SBS 2003

R2 Standard.

Installation went good until installing Server Tools. Always appears a red cross indicating Server Tools didn't install. Cannot use Server Management console ..

I've rerun setup several times removing, maintenance and reinstall but always same error.

Can anyone give me some suggestions what did I do wrong ?

Thanks in advance,

Emmanuel De Smet
