Hi Graham,

The Change Server IP wizard can be at:

Server Management | Standard Management | Internet and Email | Change Server IP Address

It will assist you in changing the SBS LAN NIC IP. The default for SBS 2003 is 192.168.16.1.

Another way is to change the LAN subnet in the router to be something like 192.168.10.x, putting the router at 192.168.10.1 and the WAN NIC at 192.168.10.2.

See the network configuration diagram at:

Two Nics, a static IP address, ISA, router

<http://www.smallbizserver.net/Articles/tabid/266/articleType/ArticleView/articleId/76/Two-Nics-a-static-IP-address>

There is also a KB article:

How to configure Internet access in Windows Small Business Server 2003

<http://support.microsoft.com/default.aspx?scid=kb:en-us:825763>

After you have the network physically set up, install ISA.

When everything is installed, run CEICW. One of Andy's articles shows you how to use CEICW (Configure Email and Internet Connection Wizard)

CEICW Walkthrough

Hi SG

Where would I find the "change server IP address wizard" and what would I change the WAN adapter's IP address to be?

Regards  
Graham
