Hello Henrik

Thank you for the continued help.

Regarding R2, I was waiting to see if SBS2008 included ISA or not before deciding whether to pay for this intermediate upgrade.

Anyway, tried reinstalling WSUS 3 with limited success. Installed via RWW rather than directly on the server and got kicked out towards the end of installation, I guess IIS restarted.

Ran setup again to install administrative console.

Console is now there but will not allow me to connect to server. Cannot uninstall WSUS and try reinstalling directly on server as when I try and remove it via control panel it says "The version of WSUS installed is incompatible with this version. You should use add/remove programs to uninstall". I get error code 0x80041453 in the log.

I am guessing that the server name I should be connecting to is the server name for the physical box (same as ISA server name, Exchange server name, etc).

I think I may have made things worse.

One more thing, if you upgrade to R2 you will get WSUS 3.0 and some other nice stuff with in that package.

I actually only see one alternative if you want this to work in a confident way, that is to reinstall WSUS.  
Some would say to restore from backup but a reinstall is done within hours so it's easier.

Use these documents where appropriate.

These documents apply to reinstalling WSUS on SBS2003 (incl R2)

When you install R2, you can upgrade the WSUS 2.0 component to the 3.0 version or skip the 2.0 installation completely and just download and install 3.0 directly.

If you are manually installing the WSUS 3.0 SP1 product on Windows Small Business Server 2003, follow the instructions in Installing Windows Server Update Services 3.0 on Windows Small Business Server 2003.

Installing Microsoft Windows Server Update Services 3.0 on Windows Small Business Server 2003

Hello Henrik

Thanks for the reply.

Logged on as admin, as before. Still no joy.  
Nothing in recycle bin.  
Cannot create shortcut to that target, it does not exist.  
If I use Windows Explorer, I can find the Update Services folder, but no  
administrationsnapin folder, just log files, setup and web services. No  
wsus.msc in any of those.

Any more suggestions?

"Henrik (Hear)" wrote:

Have you check ypur recycle bin?  
Are you logged on as another user then ordinary?

Try to create a shortcut to the following target.

"C:\Program Files\Update Services\administrationsnapin\wsus.msc"

Hello Henrik

I know there should be and  
there was but there is not  
one now – which  
is

Re: WSUS Disappeared

the  
nub of my problem.

Best Regards

Ashley

Hello  
All  
I  
have  
been  
happily  
running  
WSUS3.0  
on  
SBS  
2003  
R1  
for  
a  
while  
now,  
everything  
working  
fine.

Re: WSUS Disappeared

Recent  
update  
(maybe  
to  
3.1?)  
and  
WSUS  
seems  
to  
have  
disappeared.  
No  
longer  
a  
link  
within  
administrative  
tools,  
no  
option  
of  
adding  
in  
to  
MMC.  
If  
I  
try  
and  
navigate  
to  
<http://server:8530/wsusadmin>,  
no  
joy  
either.

Any  
pointers?

Best  
Regards

Ashley
