You do all of this within the ISA Server Management Console. I suggest if you are unfamiliar with using ISA Server Management that you get someone who is because you could do some serious damage. Hardly unlikely because it is pretty simple and straight forward to someone who is familiar with ISA.

Where do I create "Deny" Access rule at? Not following these directions, confused.

How do I make sure this rule is ahead of SBS Internet Access Rule?

You create a new "Deny" Access Rule for "All Outbound Traffic" from "All Protected Networks" to a newly created "Domain name Set" that is populated with the blocked websites. Make sure this rule is listed ahead of the SBS Internet Access Rule.

How do I block it with ISA?

I have SBS 2003, and I have a need to block YouTube, is there a way I can block this site for a couple of users or do I have to block it for all users?

It is possible to block it using ISA, however I rather use a dedicated web filter. If you have a 486 or newer with 1 GB ram, you can install the open source dansguardian, and have it your way, any way.
