And don't let CEICW configure your router automatically even if it's a UPNP capable router.

Hello Cris,
After disabling one of the two dual ports, I no longer receive an error from my SBS Best Practices Analyzer tool. There is nothing plugged into the second dual port.

One port runs to my router, the other to a Linksys switch.

--

Thank you,

Richard

I'm thinking one of those two port NICs and yes...disable IPv6

Does this NIC have two ports where you can plug in network cables? Do you have cables in both...what are they connected to at the other end of the cable?

MVPs Do Not Work For Microsoft

Re: Desperate to email; Can you HELP?

Please do not contact me directly. Please post only in the newsgroup so all can benefit

The ipconfig looks like it's for a Vista computer with IPv6 installed?

What

kind of server is this? SBS doesn't support IPv6.
