Click on the domain name (domain.local) in Group Policy Management, select the GPO and then click the arrow to the left to move it to the top of the list

OK, now the new GPO (MCA_RWW) is listed, but the ie homepage is still set to companyweb, rather than companyweb/mca:

Microsoft Windows XP [Version 5.1.2600]
(C) Copyright 1985-2001 Microsoft Corp.

C:\Documents and Settings\billw>gpresult

Microsoft (R) Windows (R) XP Operating System Group Policy Result too
Copyright (C) Microsoft Corp. 1981-2001

Created On 5/15/2008 at 11:57:12 AM

RSOP results for LIGHTSHIPGROUP\billw on MCAPC01 : Logging Mode

OS Type: Microsoft Windows XP Professional
OS Configuration: Member Workstation
OS Version: 5.1.2600
Domain Name: LIGHTSHIPGROUP
Domain Type: Windows 2000
Site Name: MainOffice
Roaming Profile:
Local Profile: C:\Documents and Settings\billw
Connected over a slow link?: No

Re: Set GPO for specific user group

Susan,

Do this. Create the GPO by clicking on the domain name (domain.local) and selecting 'create and link a gpo here'. Then go to MyBusiness OU, and under 'Users' create a new OU. Right click on the new OU and select link an existing GPO. Link the GPO you created here.

Click on the GPO and add the security group you want the GPO to apply to. Remove the 'Authenticated Users' group. From the workstation run gpupdate at the command prompt.

See if that helps. If not, run gpresults again and see if the OU is listed and whether is applied or not

Thanks for your help – I know I'm doing somethign
incredibly stupid!

Hmmm, nope not listed – the new OU is MCA and the new
GPO is called MCA Limited Users, with Security Filtering
set to only the Limimited Users Group (which BillW is a
member of) :

USER SETTINGS

CN=Bill
Watts,OU=SBSUsers,OU=Users,OU=MyBusiness,DC=lightshipgroup,DC=local
Last time Group Policy was applied: 5/15/2008 at 11:00:47

Go to the command prompt of a workstation
logged in as a user of the new group, and
run: gpresult /r

Is the new GPO applied to the user? If not,
try running: gpupdate /force and check again
to see if the GPO is applied

Re: Set GPO for specific user group

news:uaU8w3otIHA.2068@xxxxxxxxxxxxxxxxxxxxxxxxxxxx

hi all,

We have a user group defined for certain folks who connect via RWW only, who need certain policies applied:

1. Force logoff after idle
2. Change IE homepage from company web
3. Specific file/folder auditing

I created a new OU and GPO (setting just the IE homepage for now), linked the GPO to the OU, set the OU to the group, verified the new GPO is the first item in the OU Precedence list. The IE homepage is still set to companyweb for the users in the group (applied via Default Domain Policy).

Then I set the OU to Block Inheritance, but still no joy.

What am I missing or doing wrong? Searching the web I see lots of references to setting a no Override, but cannot find this option?

TIA,
SusanV
