You're correct, all appears to be working except that no computers show up under the domain name in windows network and the client computers don't see the server in their windows network. It smells of something wrong in DNS, but I can't find what it might be. I think I will let it rest for a day and see if it helps itself. Thanks for all of your help.

Joe

I'm surprised that the BPA wouldn't have alerted you to file/print sharing not enabled on the SBS internal NIC.

It sounds like you're ok now. Don't bother with the browsing from network neighborhood, use \\shares.

Duh, file and printer sharing was not checked. Thanks. Its the simple stuff that can get you. That of course fixed the problem with the drives not connecting to clients

The server still does not show up in Network places nor does any other computer in the network. The domain shows up but there are no member computers listed.

when running CEICW, no errors

Re: Users cant find SBS server– Help needed

\\servername shows up all of the share on the server

could not find any listings or tabs for bindings

"Les Connor [SBS MVP]" wrote:

can you go to \\<servername> from a client and see the shared resources on the server?

Don't rely on 'network browsing'.

I found 2 gost NICS from an old Intel card that was installed one for troubleshooting and deleted them. LANNIC entries appear correct as per KB 875422, but it is a litte vage in several areas.

Still have the problem, the severdoes not show up in its own network

"Les Connor [SBS MVP]" wrote:

Can you follow the instructions to sort the lannic registry entry? I believe the SBS BPA provides instructions or a link?

You may need to check for ghosted nics, and delete those.

Re: Users cant find SBS server– Help needed

1.
Click
Start,
click
Run,
type
cmd.exe,
and
then
press
ENTER.
2.
Type
set
devmgr_show_nonpresent_devices=
and
then
press
ENTER.
3.
Type
Start
DEVMGMT.MSC,
and
then
press
ENTER.
4.
Click
View,
and
then
click
Show
Hidden
Devices.

Last
night
I
updated
the
NIC
driver
on
Dell
server
while
troubleshooting
a
problem
with
Dell
techsupport.
Doing
so
erased
all
IP
addresses
on
NIC
cards.

Re: Users cant find SBS server– Help needed

I
Added
the
correct
address
on
both
NICS
and
reran
CEICW.m
Since
then
no
one
can
connect
to
the
server.

DHCP
works
,
email
works,
everyone
can
access
the
internet
thru
the
server.

If
I
look
in
network
places
(on
the
server),
no
computers
show
up
in
the
domain

Re: Users cant find SBS server– Help needed

including
the
server.

If
I
look
in
network
places
(on
a
client
computer),
all
client
computer
show
up,
but
the
server
is
missing

On
the
server,
if
I
search
for
a
client
computer
by
name
it
finds
it
ok.
On
a
client
however
a
search
for
the
server
comes

Re: Users cant find SBS server– Help needed

up
not
found

DNS
and
DHCP
look
ok!!
