Henrik (Hear) wrote:

Les, does this apply on a Windows2003 (non-SBS) AD
domain network
as well?

Domain Controllors and members have a well defined time sync
algorithm and you do not want to break it.
PDCe's should be the only servers getting external time sync. All
others should maintain the time sync heirarchy.

<http://technet2.microsoft.com/windowsserver/en/library/71e76587-28f4-4272-a3d7-7f44ca50c01810>

That said, what Les posted works excatly the same for other PDCe's
(Like SBS is) as well.

Copy and paste these lines into notepad, and
save as <yourname>.bat

Watch for line wrap, there are 5 lines, the
first ends with the
word MANUAL.

```
w32tm /config  
/manualpeerlist:"0.pool.ntp.org  
1.pool.ntp.org  
2.pool.ntp.org",0x8  
/syncfromflags:MANUAL
```

```
w32tm /config /update
```

```
net stop w32time
```

```
net start w32time
```

```
w32tm /resync /nowait
```

Run the batch file on your SBS. You can
replace the time server
list (between the " and the ") if you like, but
you probably don't
need to. Check your event log for successful
time sync after you
run it. --

Is there a way to change the
location or server to which
SBS 2003
syncs its time.
