Hi

I named machines different. I add RedHat to a domain. I have confirmation, I can see users structure and I have communication with AD.

I can also use `wbinfo -a WINDOWSDOMAIN+domainuser%userpassword`

this command is succesful:

When I restart PC and try to login from login page the AD blocks my account.

Event Type: Error

Event Source: NETLOGON

Event Category: None

Event ID: 5723

Date: 6/12/2008

Time: 11:52:07 AM

User: N/A

Computer: SERVER1

Description:

The session setup from computer 'REDHAT' failed because the security database does not contain a trust account 'REDHAT\$' referenced by the specified computer.

USER ACTION

If this is the first occurrence of this event for the specified computer and account, this may be a transient issue that doesn't require any action at this time. Otherwise, the following steps may be taken to resolve this problem:

If 'REDHAT\$' is a legitimate machine account for the computer 'REDHAT', then 'REDHAT' should be rejoined to the domain.

If 'REDHAT\$' is a legitimate interdomain trust account, then the trust should be recreated.

Otherwise, assuming that 'REDHAT\$' is not a legitimate account, the following action should be taken on 'REDHAT':

Re: database does not contain a trust account

If 'REDHAT' is a Domain Controller, then the trust associated with 'REDHAT\$' should be deleted.

If 'REDHAT' is not a Domain Controller, it should be disjoined from the domain.

Event Type: Error
Event Source: NETLOGON
Event Category: None
Event ID: 5805

Computer: SERVER1
Description:
The session setup from the computer REDHAT failed to authenticate. The following error occurred:
Access is denied.

Any idea?

If you have the same machine name it won't work – you need to give them different names.

I am configuring Red Hat machines to add them to a DOMAIN. It seems to work correctly in linux point of view.

I have got one mashine with 2 systems on it Ms XP pro and Red Hat.

When I boot the machine fom Ms XP pro everything works fine. When I boot this machine as the Red Hat I can add it to a domain but I cant login from the front screen (GNOM).

After that If I cant login to the domain under Ms XP. In logs I have
