Subject: SBS 2003 Shares over VPN

Corporate information is shared on folder "Main" there is also the network share "Users"

Server is on a single nic connected to the switch which goes to the sonicwall. Firewall is providing the VPN over a T1 circuit. The server has no problems connecting to the internet nor is the share drives not functioning as the user can see the Users share drive, just not the "Main" share.

There are no entries in the eventlog whenever I try to access the "Main" share directory. I just get an error saying that the network path does not exist, which is not true as that path works when the system is local to the network.

| Hello Wesley,

|  
| Thank you for your post.  
| My name is Gary Wang, and it is my pleasure to work with you on this  
| issue!

| Please allow me to confirm that my understandings are correct. As I  
| understand it, the issue is:

|  
| Your SBS remote clients cannot see your main corporate share when VPN

|| established.  
||  
|| If I have misunderstood your concerns please feel free to let me know.  
||  
|| Suggestion :  
|| =====  
|| I am not quite sure about your word "main corporate share", could you  
|| please provide more information about it?  
||  
|| And may I know your exact symptom of network topology? For example, you  
|| are  
|| in single NIC scenario or 2 NICs? Which type of connection you are  
|| using?  
|| Direct connection to broadband with PPPoE or modem connection to POTS  
|| or  
|| ISDN? VPN is provide by Sonic firewall or SBS? If it is SBS, which  
|| application you are using, RRAS or ISA?  
||  
|| By the way, please referring to the following document to make sure  
|| that  
|| you had configured CEICW in right way:  
||  
|| How to configure Internet access in Windows Small Business Server 2003  
|| <http://support.microsoft.com/kb/825763/en-us>  
||  
|| Also, please help to collect the following information for further  
|| analysis:  
||  
|| 1. Check eventlog please help save it to \*.evt and send to me.  
|| 2. Please help to capture a screenshot of the exact symptom when the  
|| error  
|| occurs, save it to \*.jpg files and send to me.  
||  
|| My email address is v-gzwang@xxxxxxxxxxxxxx  
||  
|| I look forward to your reply. Also, if you have any questions or  
|| concerns,  
|| please do not hesitate to let me know. I am happy to help. :-)  
||  
|| Thank you for your time and cooperation!  
|| Best regards,  
||  
|| Gary Wang(MSFT)

|||  
||| I have an SBS server behind a sonicwall that is also used as a VPN.  
| DHCP  
|| is  
||| handing out internal IPs to the remote systems. They can connect  
with  
|| the  
||| SBS server for exchange, they can RDP into the SBS server, they can  
see  
|| the  
||| Users share on the SBS, however they cannot see the main corporate  
| share  
|| when  
||| connected. Anyone got any ideas? I'm fresh out  
|||  
||  
||  
|  
|
