Juts a guess...

If not done already: When you upgrade to SQL Server 2003 Sp2, copy Sp2 to the C: drive rather than another partition or some other drive (including an external drive). The try to run SP2.

Hi bass_player thanks for your reply.

I have tried to restart the MICROSOFT##SSEE as advised but got the following

error:

Could not start the Windows Internal Database (MICROSOFT##SSEE) service on local computer. Error 1053: The service did not respond to the start or control request in a timely fashion.

There was also an Error in the Application Log as follows: Event ID: 1000
Source: Application Error. Faulting application sqlserver.exe, version 2005.90.3042.0 faulting module kernel32.dll, version 5.2.3790.2919, fault address 0x0015e02.

Any further help would be appreciated.

Rod

On booting our SBS Server 2003 Sp1 (Not R2) I receive the following error message on the screen.

SQLDumper library failed initialization. Your installation is either corrupt or has been tampered with. Please uninstall then re-run setup to correct this problem.

After looking at the System logs in the event viewer the following 5 error messages appear:

ID: 7022 Source: Service Control Manager
The Kerberos Key Distribution Center service hung on starting.

ID: 7009 Source: Service Control Manager
Timeout (30000 milliseconds) waiting for the Windows Internal Database (MICROSOFT##SSEE) service to connect.

ID: 7000 Source: Service Control Manager
The Windows Internal Database (MICROSOFT##SSEE) service failed to start due to the following error:
The service did not respond to the start or control request in a timely fashion.

ID: 7022 Source: Service Control Manager
The SQL Server VSS Writer hung on starting.

ID: 7034 Source: Service Control Manager
The SQL Server VSS Writer service terminated unexpectedly.

Re: SQL Writer error message on bootup.

And there is 1 error in the Application Log in the Event Viewer as follows:

ID: 1008 Source: Perflib
The open procedure for service "PSched" in DLL "C:\Windows\System32\pschdprf.dll" failed. Performance data for this service will not be available. The status code returned is the first DWORD in the attached data.

It was recommended that I install SQL Server 2003 Sp2 to fix the problem, so I downloaded SQL Server 2003 Sp2 from Microsoft and tried to install with the following result:

During setup a message window appears saying that it detected the following SQL Server 2005 features: MSXML 6.0 Parser. After clicking continue it says there are no locked files and then it appears to commence installation when a error message appears saying "Hotfix.exe encountered a problem and needs to close, so i then click on a view summary button but it contains no data, the program then closes.

Any help on these issues would be appreciated.

Regards
Rod.
