After installing updates (except for 3 updates for ie7 for servers which failed) and after restart, the issue has been resolved. After restart the 3 updates installed OK. I have not yet reinstalled AVG for SBS but will and will watch this system closely.

SBS 2003 SP2 Standard Edition. Server has been the most stable of all the ones I look after. Event logs squeaky clean, etc. Trouble started within a week of installing AVG 8.0 Anti-Virus SBS Edition. Coincidence? Symptom is that there is a blank pane displayed for every node one clicks on in server manager except for some of the Advanced Management nodes. I have set the usual scan exceptions with AVG but it makes not difference. All services are running and the event logs are clean. I have done an IIS reset but no joy. Any idea how I might get to the bottom of this?
