Hello Mike,

Thank you for posting here. Let's also thank Dave and Joe for the input.

According to your description, I understand that you create a new account and unable to log it on OWA. If I have misunderstood the problem, please don't hesitate to let me know.

In fact, we unable to assign a newly created user account to a existing workstation thru the Add User Wizard. We can only assign newly created user account to a new workstation.

Dave and Joe are right, we can logon each workstation with each domain user account by default. We no need to assign the user to the workstation.

Based on my research, after we create a new user thru Add User Wizard, the user can logon OWA immediately. I suggest we try the following steps to see if we can resolve this issue:

1. Ensure you create the new user account thru Add User Wizard: Server Management console -> Users -> Add a User link.
2. Please try to logon RWW first after the user be created, then click Read my company e-mail link to access OWA.

If we cannot resolve the issue after we perform the steps above, please help me collect some information for further investigation:

1. What error do you get when you try to logon OWA? Please capture screenshots of the error messages and send the pictures to me at v-terliu@xxxxxxxxxxxxxxxx
2. Can you logon OWA after you logon one workstation?
3. Do you be prompted to input new password when you first logon workstation?

I hope these steps will give you some help.

Re: assign new user to workstation

Thanks and have a nice day!

Best regards,

Terence Liu (MSFT)

Well, I created an account and tried to test it on OWA and it didn't authenticate. So I figured if I logged into a workstation and

authenticated

on the domain, OWA may work after that.

Hi All,

I'm sorry to bother with such a dumb question that is probably right

under

my nose:

I can't seem to assign a newly created user account to a workstation already joined to the domain. I want to assign the new account to a workstation to which another user is already assigned in order to

login.

Any light shed on this would be really appreciated.

SBS 2003 Std. / Single NIC / Exchange 2003

As far as I know, 'assignment' is something only offered when the account

is created.

What problem are you trying to solve? By default, any domain user can

Re: assign new user to workstation

logon to any workstation. If you're using roaming profiles or a redirection equivalent, the profile should be available anywhere.
