Hello All,

I have an SBS 2003 Premium R2 running well for about a year and half now. I am currently having outbound SMTP email issues, not just for one domain but for ALL outbound emails regardless of domain. I have called our ISP (Verizon) to set the Reverse DNS for our server but they said it may take 24 - 48 hrs to take effect. But I am not sure if that is the problem though since it has worked for about 1 and half years till now. Some users get the following error message;

"This is an automatically generated Delivery Status Notification.

THIS IS A WARNING MESSAGE ONLY.

YOU DO NOT NEED TO RESEND YOUR MESSAGE.

Delivery to the following recipients has been delayed."

Any ideas?

Thanx.
