Hello,

Thank you for your update.

As far as I know, we can set forest-wide dsHeuristic flags to control which operator groups are protected by adminSDHolder. By using this new option, you can set some or all the enlisted four protected groups not to be protected by adminSDHolder.

Account Operators
Server Operators
Print Operators
Backup Operators

I understand that you would like to turn off the protect group feature as a whole. However, as you know, forest wide groups, such as Domain Admins, have great influence on the domain security. We cannot turn off the adminSDHolder for all protected groups.

For more information about adminSDHolder, you may refer to:

817433 Delegated permissions are not available and inheritance is automatically disabled
<http://support.microsoft.com/kb/817433>

Hope it helps. If you have any questions or concerns, please do not hesitate to let me know.

Best regards,
Miles Li
