Hello and Thanks in Advance for any help/advice!!!!

I have a client with Windows 2003 SBS SP2 server that we installed, long story short one day the server shut down and upon reboot did a checkdisk and orphaned a bunch of files. Since then we've run a repair on the O/S reinstalled a bunch of the SBS components and everything is working fine for all the users locally with networking, Exchange/Email, etc...Even OWA works great!!!

Here is the big problems we are having...
OWA works fine!

RWW does not work at all, not even locally. When i try to go to <http://server/remote> internally it gives error Page Cannot Be Displayed.

Monitoring and Reporting, I finally got installed successfully by following this...
<http://forums.techarena.in/small-business-server/733930.htm> but it still will not show the page when you view the reports in Server Management. It gives this error... HTTP Error 404 – File or directory not found.

Internet Information Services (IIS)

WSUS does not work and you cant configure it at all in Server Management applet. It always shows this error...HTTP Error 404 – File or directory not found.

Internet Information Services (IIS) Bunch of Event ID 421 in App Log with 447 and 7034 events in the System Log.

The same error... HTTP Error 404 – File or directory not found.
Internet Information Services (IIS) comes up when you click on Backup in Server Management also.

I have reinstalled all the components via the Add/Remove Windows 2003 SBS Setup Wizard. I have gone through my IIS with another Windows 2003 SBS Server i have and most settings are the same.

Big SBS Problems

I think I have a serious problem with IIS. when i try to go to <http://server/remote> internally it give error Page Cannot Be Displayed. If I go to <http://server> the page opens to the Welcome Page but every link off of that gives error..HTTP Error 404 – File or directory not found or the Remote error listed above.

Sorry if I went on too much there...just trying to give as much info as possible...If you need any more information please let me know ... HELP PLEASE!!!!!! I really want to get RWW working, WSUS and Monitoring Reports to be visable.(It emails me the reports...but with the error page of HTTP Error 404 – File or directory not found. Internet Information Services (IIS)

Thanks CC!!
