Check: <http://www.15seconds.com/issue/011127.htm>

I believe you'd use '.Remove'

Keep us informed on this, please. I'd like to know also.

And always try the MS KB first before posting.
The answer is probably already posted.

How can I remove a domain group from a local group?
I have used the code below to add a specific domain group to the local admin
group on every machine the code is run on
How can I now do the reverse and remove the group from any machine the code
is run on?

```
'-----8<-----  
Set oWshNet = CreateObject("WScript.Network")  
sGroup = "Hanlon"  
sNetBIOSDomain = oWshNet.UserDomain  
sComputer = oWshNet.ComputerName  
Set oGroup = GetObject("WinNT://" & sComputer & "/Administrators,group")  
Set oUser = GetObject("WinNT://" & sNetBIOSDomain & "/" & sGroup & ",group")  
' suppress errors in case the user is already a member  
On Error Resume Next  
oGroup.Add(oUser.ADsPath)  
On Error Goto 0  
'-----8<-----
```
