What dont you get this isnt yahoos chatroom atleast I hope I thought this was a respectable forum. I recieved much help from other people without these smart elect remarks. Then you have nerve to talk about special people which is pretty low. I hope you go to church. All I asked was for help not anything more I dont know scripting I am in the process of learning reading books. I couldnt finish the rest of the script to which you gave me that hint. I literally just started to try scripting. I am going to school for networking and trying to learn scripting on the side. Instead of you helping me you and AL seem like you want to start arguments. I dont understand what you get out of this. Like your trying to play a game with me either you can give me the solution and be nice about it or dont worry about it and say nothing at all. What is so hard for you to understand. I see there is many nice people in here willing to help then there are those who just want to chat like your in yahoo chatrooms. Well go there if your not going to help .
