I SCRENC an ASP page and I got the following error when it was called:

-----

Active Server Pages error 'ASP 0140'

Page Command Out Of Order

/comms.asp, line 1

The @ command must be the first command within the Active Server Page.

-----

Script encoder inserts <%@ LANGUAGE = VBScript.Encode %> to the front of the scrambled file and it seems this is causing the error.

Any tips? Thanks

Sam
