Thanks, but apparently it doesn't recognize the scrambled file as an encoded script file. The error is now

```
---
Microsoft VBScript compilation error '800a0400'
Expected statement
/comm.asp, line 3
#@~^YAUAAA==@#&B6hK&r1,2oKS&Z(K@#&@#&kE4,j+ .....-----
I must mention that I INCLUDED the encoded file within a non-encoded script
with the <!-- #include file="comm.asp" --> statement. If I copied the
included file contents to the main page and encode it then it works fine. I
wonder if this is a product limitation.
