sounds like a reasonable suggestion, please bug it.

Given these alias properties on Process:

Handles AliasProperty Handles = Handlecount  
Name AliasProperty Name = ProcessName  
NPM AliasProperty NPM =  
NonpagedSystemMemorySize  
PM AliasProperty PM = PagedMemorySize  
VS AliasProperty VS = VirtualMemorySize  
WS AliasProperty WS = WorkingSet

Wouldn't "VM" or "VMS" make more sense as an alias for the Virtual\*M\*emorySize property? Plus "VM" is a widely recognized acronym.
