Is there a command to seek to the EOF (EndOfFile)?

I would expect there to be one.

Also, post your whole script (or the relevant portions) as you may think your writing to the file when your script skips it by due to a typo, etc.

Turn off the "on error resume" line if present as this will ignore any errors by doing absolutely nothing and not letting you know there was an error.

it didn't work for me.

i copied the const and put the in the file creation command

like this

```
Set objFile = objFSO.CreateTextFile(strFileName, ForAppend, True)
```

but still, whenever i execute the script it is overwriting the old file

and

not appending to the end of the old file

Please post your whole script.

Thanks

Graeme
