Hello

Trying to run a simple utility to change the drive letter of the CD ROM. The script runs fine when running locally. However if I try and run it remotely by changing the strComputer name I get an Access Denied message. This happens on the .Put\_ line. Ideas? I think it is something in Group Policy as I've removed the machine from the domain and it then works.

```
strComputer = "."
```

```
Set objWMIService = GetObject("winmgmts:" _  
& "{impersonationLevel=impersonate}!\\" & strComputer & "\root\cimv2")
```

```
Set colDisks = objWMIService.ExecQuery ("Select * from Win32_LogicalDisk  
Where DriveType=5")
```

```
For Each objDisk In colDisks  
cdrom = objDisk.DeviceID  
Next
```

```
Set colVolumes = objWMIService.ExecQuery ("Select * from Win32_Volume")
```

```
For Each objVolume In colVolumes  
If objVolume.DriveLetter = cdrom Then  
objVolume.DriveLetter = "Z:"  
objVolume.Put_  
End If  
Next
```

```
.
```
