Jeremy,

Thanks for the tips. I figured it out yesterday. It turns out that my server that runs SBS 2003 had a different time zone. I don't know if anyone has this problem before, but my server was on Central America Time Zone for some reason. The rest of the client PCs are on Central Time (US & Canada). That's the reason why I wasn't able to browse to any client PCs. Once I changed the time zone then everything seems to be working just fine.

Ed
