hi there

i'm also doing a fresh install

– i have tried both windows 2000 server & server 2003

the server i'm installing it on is new out of the box, i get to the part where i insert the disk with the SATA Controller drivers on it,

they load fine, but when i go to select a disk to which i want to install my OS on, i only can see IDE HDD's ?

is this normal ?

is there a way around it ?

the SATA card im using is – Promise FastTrak S150 SX4

thanks for your time

cheers

Justin Canino
