I use a computer startup script assigned with group policy to do this.

The command I use is:

```
net localgroup mydomain\mygroup administrators /add
```

Enter that in the computer startup scripts dialogue in a GPO with "net" as the command and the rest of the line as the parameters.

Bear in mind that if the machine is moved to a trusted domain, this group will still be a member of the administrators group. That may or may not be important to you.

Hope this helps

Oli
