I'll check and see if installing R2 on the passive server within a 2 server active/passive cluster is a supported scenario...

Will post back!

I've now tried to install on the other server within the cluster (switching it to become the passive server and pausing the node) with the same results.

I watched the last 10 minutes of the install which appeared to go smoothly with no errors.

Thanks,

Steve.

Hi Jabez,

I have already tried a second re-install with the same results. I've

Re: Can't install components on 2003 SP1 R2 upgrade

looked
in c:\windows and there isn't a windows_r2setup.log, so I searched the
whole
of the C: drive for .log files relating to R2 and there weren't any at
all.

There is a registry entry called r2setup in:
"HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\
however
so
something seems to have happened.

The install appears to have gone smoothly, with no errors or messages.
Just
to re-iterate, incase it makes a difference, I am installing R2 on the
passive server within a 2 server active/passive cluster.

Hi Steve,

Let me suggest that you try popping in the R2 CD and re-run
the
setup.exe
file. See if you are able to get it to re-install.

Also, please ZIP and upload the log file
windows_r2setup.log which is
located in C:\Windows

Hi Jabez,

Yes I rebooted but the key isn't present in
the registry?

Re: Can't install components on 2003 SP1 R2 upgrade

The install went okay as far as I can tell
though.

Hi Steve,

Please try rebooting after
installing R2 Setup.

Also please check the
registry:

HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion

Check if you have the key
"R2BuildNumber"

Thanks!

Hi all,

I have a
Server 2003
Enterprise
SP1
Active/Passive
cluster and
I've
just
installed R2
onto the

Re: Can't install components on 2003 SP1 R2 upgrade

passive as a
test.

I've
successfully
installed R2
but when I
go into Add
Windows
Components
then
Management
and
Monitoring
the R2 tools
aren't there.
I am
also
unable
to
find
anything
new in
Other
Network
File and
Print
Services.

Is the
cluster
causing a
problem or
is there
something
else I'm
missing?

Thanks in
advance,

Steve.
