Hello Donna,

The mailbox you can export to .pst file and import this way. You can also try to login as domain user and logout directly, then copy the complete content of the local user profile to the domain user profile with an administrator account and see if it works. Choose a test user, not a productive one and try it out. Should work.

Best regards

Meinolf Weber

Oops, I do have 1 follow up to the Outlook question. How do I move the Outlook data from the local user to the domain user? Import/Export? Or is there an easier way?  
Thx.  
DD

Hello Donna,

Nice to hear that you find it out. Thank you very much. :-)

Best regards

Meinolf Weber

Re: TS & Outlook (& DNS) related questions on new Win2k3 r2 server setup/install

Hi Meinolf,

Before I tell you what I did, I want to tell you I'm OK if you laugh  
:) &  
you're a patient man!  
The Watchguard router has 8 ports – 1 for the WAN & 7 for what  
appeared to  
be a switch. I had the WAN cable in port 1, a PC in port 2, &  
the  
server in  
port 3. It turns out that only port 2 works & is designed to  
uplink  
to a  
switch. Yet when I plug anything into ports 3 – 8 the lights  
come  
on  
like  
it's linked. So your 1st reaction was in the correct direction.  
Everything  
is OK now. (Perhaps I should stick to accounting ;-))  
Anyway, if I have future questions I'll start a new post.  
Regards,

DD

Hello Donna,

Disable the firewall on command prompt:  
netsh firewall set opmode mode = disable  
or Start, control panel, windows firewall and  
disable it here.

For RRAS go Start, programs,  
administrative tools, routing and  
remote access and just rightclick the  
servername, choose Disable  
Routing and remote access.

Best regards

Hi,

The server is definitely not  
on the WAN port. Cable is  
good, LEDs  
light up.

I got rid of the multihome,  
just using .3 on NIC2. I'm  
wondering

if

it has

something to do with Win  
firewall &/or Routing &  
Remote Access

which

I

think

I set up on accident during  
the install. How do I

Uninstall or

Disable

those 2 things? Can it be  
something else?

Thx,

DD

Hello

Donna,

Make sure  
that you not  
connect the  
server to an  
WAN port  
of the  
router or a  
configuration  
port. Also  
check that  
the network  
cable  
is not  
broken. On

Re: TS & Outlook (& DNS) related questions on new Win2k3 r2 server setup/install

the NIC in  
the machine  
check that it  
is enabled  
and the  
control  
LED is  
flashing. Do  
NOT  
multihome  
the DC,  
means  
to NIC's  
with  
different  
ip's on the  
same  
network.

Best regards

Meinolf  
Weber

Hi  
again,

If  
you  
have  
domain  
workstations

Re: TS & Outlook (& DNS) related questions on new Win2k3 r2 server setup/install

and  
domain  
user  
accounts,  
your  
users  
logon  
the  
same  
way  
with  
there  
domain  
account,  
when  
they  
are  
at  
home.  
So  
you  
have  
only  
to  
setup  
ONE  
user  
account.  
The  
user  
have  
to  
login  
one  
time  
to  
the  
domain,  
then  
they  
can  
also  
login  
at  
home  
with  
username,  
password  
and  
logon  
to

Re: TS & Outlook (& DNS) related questions on new Win2k3 r2 server setup/install

domain,  
NOT  
this  
computer.  
Cached  
credentials  
on  
the  
workstation  
will  
store  
the  
logon  
password  
so  
that  
they  
have  
no  
differences  
with  
working  
at  
home.

OK,  
I'll  
try  
this  
after  
I  
get  
the  
server  
setup  
complete.  
Which  
brings  
me  
to  
my  
next  
question...

As  
far  
as  
I  
can  
tell

Re: TS & Outlook (& DNS) related questions on new Win2k3 r2 server setup/install

I  
setup  
the  
domain,  
AD,  
DNS,  
DHCP,  
server  
roles,  
etc.

The  
server  
has  
2  
NICs.

I  
setup  
NIC2  
originally  
w/  
the  
following:

IP  
192.168.100.3  
Sub  
255.255.255.0  
GW  
192.168.100.1  
(the  
router)  
DNS  
192.168.100.3

But

I  
can't  
even  
ping  
the  
router  
(.1)?

My  
"lab"  
setup  
is  
as  
follows:

A  
Watchguard  
router  
(with  
a

Re: TS & Outlook (& DNS) related questions on new Win2k3 r2 server setup/install

built-in  
8  
port  
switch)  
connected  
to  
the  
internet  
1  
Win  
XP  
workstation  
Connected  
to  
router  
switch  
(No  
DHCP)  
IP  
info  
192.168.100.17  
GW  
192.168.100.1  
ISPs  
DNS  
IP  
1  
Win  
2k3  
server  
connected  
to  
router  
switch  
The  
Win  
XP  
PC  
is  
working  
fine  
pinging  
&  
getting  
out  
to  
the  
internet  
(won't  
ping  
the

Re: TS & Outlook (& DNS) related questions on new Win2k3 r2 server setup/install

server  
however)  
The  
server  
cannot  
ping  
anything  
nor  
get  
out  
to  
the  
internet  
So  
I  
hooked  
up  
the  
2nd  
NIC  
(really  
NIC1)  
and  
gave  
it  
IP  
192.168.100.6  
w/  
same  
GW  
and  
DNS  
and  
still  
nothing?  
Any  
ideas?  
Thx,  
DD
