I posted earlier questions asking how to run an arbitrary shell command from JavaScript in Netscape. IE on Windows lets you create an ActiveX shell object and use its .Run method to run an arbitrary command, and I was hoping to use something similar to launch an RDP (Microsoft's Terminal Server protocol) client from a web page. The only responses I received were chastisement for my foolish willingness to let any web site execute a shell command on my PC. That's a good point that I overlooked while under pressure to find a way to launch an RDP client from a web page.

A better question would be has anyone built a Netscape plug-in version of rDesktop or any other non-Windows RDP client?

Thanks,

Tony Scandora, Argonne National Lab, 630-252-6326
