If your logon script is vbs try testing this:

```
***** Move "My Documents" from the profile to
C:\mydocs\USERNAME *****
  oMyDocsReg = WshShell.SpecialFolders("MyDocuments")
  oMyDocsFol = "c:\MyDocs\" &
WshShell.ExpandEnvironmentStrings("%USERNAME%")
  If oMyDocsReg <> oMyDocsFol then
    If not oFSO.FolderExists(oMyDocsFol) then
      If not oFSO.FolderExists("c:\MyDocs") then
        oFSO.CreateFolder("c:\MyDocs")
      End If
    If not oFSO.FolderExists(oMyDocsReg) then
      oFSO.CreateFolder(oMydocsReg)
    End IF
    oFSO.MoveFolder oMyDocsReg, oMydocsFol
  End If

WshShell.RegWrite "HKCU\Software\Microsoft\Windows\Current
Version\Explorer\User Shell Folders\Personal",
oMydocsFol, "REG_EXPAND_SZ"
  End If
End If
```

Just sub in the new location, currently in the script it's c:\mydocs. You'll notice the path after RegWrite is where the My Documents folder location is defined.
