When Compaq thin clients connect to a Win2003 Terminal server, they sometimes get the "client could not connect to the remote computer. Remote connections might not be enabled....." error. After clicking okay 5 to 10 times the thin clients connect and perform 100%. Issue only happens when logging in. Error started when server was moved to remote location. Using same Compaq thin client locally tests good. 4 thin clients connect via 384K DSL through a VPN to the main site, which has T1 connection to internet. Do I have a latency issue or what?
