Dear all,

Currently I have a Terminal Service Licensing Server installed in Windows 2000 Server. We just new setup a Terminal Service Server in Windows Server 2003 1 month ago to let some of the client workstations to access in for the application usage purpose. Before that all are working fine and no problem occur at all, but suddently I don't know why just happen yesterday that if those client workstaions whoever were already log off from the Windows Server 2003's Terminal Service Server, they no longer log in again thru Terminal Service.

I feel that that's because of the licensing expired in Windows Server 2003, is it?

For those client workstations access to the Terminal Service Server in Windows 2000 Server, usually when the 90 days term have been expired, we just removed the MS Licensing key in the Win9x's registry then we still able to renew another 90 days term for the Terminal Service.

But for this time Windows Server 2003 act as a Terminal Service Server, are there any ways to renew the licensing period in Win9x after expired? If no, please provide me some documentations for support and review. Please feedback to me as soon as possible.

Thnks you and have a great day.

Best regards,
-Hendry Khoo-
