OK, so I was having some trouble getting some thin client (neoware) TS clients to use the right licenses, and after installing the hotfix detailed in KB837211, and using per device mode, rather than per user mode, they started to work.

In the process of troubleshooting the problem, the Terminal Services License server had some licenses put into it, that we weren't going to use. So to clean them out, I de-installed the license service.

But now, since all the thin client's had gotten valid 2003 ts per device licenses before I blew away TS Licensing, I can't see any one picking up licenses, not even the temporary licenses.

I need a way to force these thin clients to re-license, so I can see if they are going to pick up the right licenses. I tried deleting HKLM\Software\Microsoft\Mslicensing per another KB article on both the client session and locally on the affected server (which is running both TS and TS licensing).

Help?
