Tried that.

Upon starting TS Licencing I am told "No Terminal Server Licence Server is available in the current domain or workgroup. To connect to another licence server, click Action, click Connect, and then type the server name."

So I then go to Action – Connect – and enter the TS servers name "TS1"

I now get the little Licence Server with "TS1" next to it with a status of "Activated".

Connecting to the server with RDP client is met with "The remote session was disconnected because there are no Terminal Server Licence Servers available to provide a licence. Please contact the server administrator".

A quick look in the Servers event log reads:–

Source TermService

Event ID – 1004

Computer – TS1

The terminal server cannot issue a client licence. It was unable to issue the licence due to a changed (mismatched) client licence. Insufficient memory, or an internal error.

I've tried uninstalling the TS Licencing service off the TS box, deleting the HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\MSLicencing key, restarting then reinstalling the Licencing Service and restarting again but the above error messages remain consistant.

I've also tried adding the:–

HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services\TermService\Parameters\LicenseServers\TS1

or

HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services\TermService\Parameters\LicenseServers\192.168.

Re: Single Windows 2003 TS server in Windows 2000 domain.

keys before restarting again.

Cheers

.
