Hello,

as I have heard, Windows Server 2003 allows two administrative connections at the same time, without the need of terminal services.

Now i wonder: Is it absolutely necessary, that you have administrative rights in this mode?

Because in my Case I just want to allow one single user besides an Administrator, and this one should get power user rights at best.

And: do the group policies for terminal services also restrict users when no terminal services are used (but just the mentioned Remote Desktop for Admins)?

.
