I did a set p in the profile that failed, please see below... When i restart the server all is well for a few users then it starts again. 1508 is an interesting one, we do allow all users on this server to have full administration access due to some of the apps.

What would u suggest is the best level of restriction and performance for 15 users. What would i and should i change in the RDP Connection and for the security groups of people accessing?

I did also ghost the hard disk and place in an identical piece of server hardware (HP ProLiant) and have the exact same issues.

Matthew

```
C:\Documents and Settings\TEMP.D2K.006>set p
Path=C:\program files\hewlett packard\authentication
server\C:\WINDOWS\system32
;C:\WINDOWS;C:\WINDOWS\System32\Wbem;C:\PROGRA~1\CA\SHARED~1\SCANEN~1;C:\PROGRA~
1\CA\ETRUST~1;C:\Program Files\Philips Speech\SpeechMike

PROCESSOR_REVISION=0b01
ProgramFiles=C:\Program Files
PROMPT=$PSG
```

```
C:\Documents and Settings\TEMP.D2K.006>
```

I also cleared the event log and here is what i get...

1508

Windows was unable to load the registry. This is often caused by

Re: Profile error on logon...

insufficient memory or insufficient security rights.

DETAIL – The process cannot access the file because it is being used by another process. for C:\Documents and Settings\Matthew\ntuser.dat

For more information, see Help and Support Center at <http://go.microsoft.com/fwlink/events.asp>.

--

Windows cannot load the locally stored profile. Possible causes of this error include insufficient security rights or a corrupt local profile. If this problem persists, contact your network administrator.

DETAIL – The process cannot access the file because it is being used by another process.

For more information, see Help and Support Center at <http://go.microsoft.com/fwlink/events.asp>.

--

1010

Failed to set the user's home directory (Drive H: connected to Share \\Chimaera\Matthew\$).

For more information, see Help and Support Center at <http://go.microsoft.com/fwlink/events.asp>.

--

1511

Windows cannot find the local profile and is logging you on with a temporary profile. Changes you make to this profile will be lost when you log off.

For more information, see Help and Support Center at <http://go.microsoft.com/fwlink/events.asp>.

--

1515

Windows has backed up this user's profile. Windows will automatically try to use the backed up profile the next time this user logs on.

For more information, see Help and Support Center at <http://go.microsoft.com/fwlink/events.asp>.

OK, thanks for getting back here.

Event 1525 is self-explanatory: you should disable offline caching on the folder which stores the roaming profiles. You do this on the file server which shares the folder. Documented here:

287566 – The Cache Option for Offline Files Must Be Disabled on Roaming User Profile Shares
<http://support.microsoft.com/?kbid=287566>

I haven't seen Event 1515 before, but I don't use local profiles, except for Administrators. Have you verified the obvious: profile path and permissions? Can you open a command window within the session and type "set p" (without the quotes)? This will show you the actual profile path. Compare it to the settings in your AD account, or wherever you define the TS profile.

Note: EventID.net lists EventID 1515, source Userenv with the following description:

"Windows has backed up this user's profile. Windows will automatically try to use the backed up profile the next time this user logs on."

And there's one comment from a user:

"My profile was blocked after that event. The folder "My Documents" disappeared but a backup was created in *.chk files. The cause appears to be a bad sector on hard disc."

Could this have anything to do with your situation?

Which OS are you running on the Terminal Server, W2K or 2003?

Which SP?

I assume that you are using roaming profiles? Where are they stored? Can you manually connect to the shared folder where the

profiles are stored, from within a TS session?

Are there any Events in the EventLog on the Terminal Server?

Can you post the EventID and Source?
