I was told by the regional Citrix Rep and his support guy that we could install Citrix on our DC running Server 2003 Standard. Ran install and kept getting an installation error. After about 3 days of research, they say you can not install Citrix on a DC. I just used the Transition Pack from MS to convert a SBS2003 server to Standard just for this purpose. Has anyone found a workaround? What other options are there?

Thanks!
