hello,

we are going to integrate the following configuration:

In a windows 2000 domain with 1 w2k dc (ts-license-server installed) and 1 w2k ts we are going to add a w2k3 ts.

we want to continue using the w2k ts as a backup server in case that the w2k3 ts server crashes.

so is it now possible to keep the old ts-license-server on the w2k dc alive to be able to serve the w2k ts if necessary? that means we will have two ts license servers (1 w2k3 and 1 w2k), if we add the w2k3 ts, in our w2k-domain. w2k ts as backupserver but not having the new w2k3 ts-license-server available in case of a crash wouldn't be a backup or?

another question is, if this configuration would also be fine if we upgrade the schema and the domain to w2k3 without using a w2k3 dc for the next months?

.
