OK, the problem is that the TS is running on a DC. This is **not** recommended, for both security and performance reasons. You are allowing your users to use your DC as their personal workstation, with very few possibilities to lock the server down.

If you want to continue with this setup, you will also have to give the users the user right to "Logon locally" in your Default Domain Controller Security Policy.

Thanks for your reply!

Yes, this TS is a domain controller.

The right is set in users account properties.

And I can't find in any of the policies the "Log on through Terminal Services" right.

thanks again.

This user right can be found in the user account properties in AD, on the "Terminal Services profile" tab.

Re: Users can't use terminal services !!!

It can also be set in your Default Domain Policy, under
Windows Settings – Security Settings – Local Policies – User
rights Assignments
"Log on through Terminal Services"

Did you add your users to the *local* Remote Desktop Users
group on the Terminal Server (as opposed to the domain wide
Remote Users group)?
This TS is not a Domain Controller, is it?

microsoft.public.windows.terminal_services:

Hello, I've installed Terminal Services on a Windows 2003
R2, and
purchased CAL licenses for the Terminal services server and
activated them.

But now I'm stuck on the message "The user doesn't have
permission to
logon to terminal services", something like this, and "Add
user to group Remote desktop users".

I've added the users to the "Remote desktop users" group,
but still
nothing, not even the Administrator can logon to terminal
services.

I think it's a problem with policies, because I can't find
the policie
for the right to logon remotly to the server.

Thanks for any help
Paulo Sousa
