Have a look at the pdf printer section:

Jeff.. I'm sure you are perfectly correct, but nonetheless, the total amount of memory being used by Adobe Reader is almost twice that used by FoxIT. The usage may be due more to how the document itself is handled versus the app.

Further testing has shown that FoxIT's ability to show a pdf onscreen is related to TS and the pdf itself. Some pdfs can be seen in a text mode which doesn't show the graphics and some are not viewable at all, even though they print correctly. All pdfs tested work fine from the console.

Thanks for your response. If anyone knows of another reader which works with TS, I'd like to hear about it. Meanwhile, I'll take the issue up with support at Foxit Software.

How are you determining that Acrobat is taking too much memory? Simply looking at Task Manager is not enough. Windows executables, dll's, etc are actually shared in memory and task manager does not show this correctly. For instance, the first time Acrobat is loaded it is assigned a memory address, all other users will use this same address and read the program from there instead of loading it again in memory.

Is there a good alternative to Acrobat for reading pdfs on a  
TS?

Acrobat works, but it's a bit of a memory hog so I'm seeking  
something  
which has a smaller memory footprint.  
I've tried FoxIT, but the pdfs are not readable on the screen  
although  
they print just fine.

TIA... ~Joe
