Have you checked in TS Manager?

Yes only 1, the active one

The other session is probably still there, but disconnected.

no

To avoid this, configure a time-out on disconnected and idle sessions and have the session reset when the time-out is exceeded.

Done

It is on both our Terminal servers, the others are ok.

On terminal server only 1 available, other 2 available.

Others I receive a message when third is requested (the ts has exceeded the max number of allowed connections), terminal servers just take over the session.

microsoft.public.windows.terminal\_services:

Hi,

Our terminal server (Windows 2003) has only 1 admin session. Few weeks ago there were 2 of them.

How can this happen?

How can I solve this?

Thx
