I have not tried it, but how about:

GPO for console:

- Allow Apply Group Policy to Authenticated Users (default)
- Deny Apply Group Policy to REMOTE INTERACTIVE LOGON

GPO for remote:

- Allow Apply Group Policy to REMOTE INTERACTIVE LOGON (*only*)
- TP

Actually its not for normal users.

I have a policy that anyone who is a member of the domain admins group (restricted to 4 people plus service accounts) will have a policy applied to them that causes the password screen saver to come up after 4 minutes. This is to prevent someone from coming behind us if we are working on several machines. Now for the actual desktop i am working from, this is actually preferable. But for those of us system admins on 5 or 6 terminal server (remote admin actually) sessions, having those session lock, too, is quite annoying.

So i am trying to develop a way to have policy apply only to real direct connections and not to the myriad terminal server sessions i use on a day to day basis.
